

MUHAMMAD ABDULLAH

AI Product Builder | Vibe Coder

SaaS · AI Systems · Automation · APIs · UI/UX · Rapid Product Prototyping
Faisalabad, Pakistan · abdullahp114@gmail.com

PROFILE

AI-native product builder and vibe coder focused on turning ideas into working, deployed products. I combine product thinking, AI-assisted development, UI/UX, APIs, data flows, automation and rapid iteration to build useful systems end to end - not just static pages.

Built across SaaS, AI workflows, developer tooling, market intelligence and community infrastructure. Strong at taking an unclear problem, defining the product flow, assembling the technical pieces, testing the experience and shipping a usable result.

EXPERIENCE

Independent AI Product Builder / Vibe Coder

Product design · AI-assisted development · integration · deployment

- **End-to-end product execution.** Turn concepts into product structures, user flows, dashboards, workflows and deployed web applications.
- **AI-native build process.** Use modern AI coding workflows to accelerate implementation, debugging and iteration while keeping control of product behavior and user experience.
- **Systems and integrations.** Work with APIs, databases, authentication, market/data feeds, automation logic and third-party services to create connected product workflows.
- **UI/UX and product logic.** Design practical interfaces around how users actually move through a system, then refine the build through testing and repeated iteration.
- **Rapid delivery.** Move from a blank-page idea to a functional prototype or MVP quickly, then improve reliability, usability and scope after the first working version.

WHY I ADD VALUE

- **Builder mindset.** Own the gap between an idea and a working product instead of waiting for every requirement to be fully defined.
- **Fast learning and iteration.** Adapt quickly across unfamiliar tools, APIs and product domains, using AI to shorten the research-to-build cycle.
- **Product over demos.** Focus on usable flows, connected logic and deployment - the parts that turn an attractive interface into something people can actually use.
- **Distinctive UI/UX.** Build creative, polished and user-friendly interfaces with strong visual hierarchy, thoughtful interactions and original product design - not generic template-driven screens.

WHAT I BUILD

RESOLVE / [View live project](#)

Economic intelligence & community funding system that maps verified contributions across code, research and media into funding and settlement workflows.

RepoDiet / [View live project](#)

GitHub repository maintenance tool that finds repository debt, separates safe and protected changes, and verifies cleanup before review.

MERIDIAN / [View live project](#)

Crypto market intelligence & strategy workspace combining market analysis, strategy scoring, automated signals and historical replay for rule-based decisions.

CORE EXPERTISE

AI-Assisted Product Building
Rapid Prototyping / MVPs
Product Logic & User Flows
UI/UX Direction
API & Data Integration
Workflow Automation
Testing & Iteration
Deployment

TECH & PLATFORMS

Next.js / TypeScript
Supabase / Postgres
Prisma
REST APIs / Webhooks
GitHub / Vercel
AI / LLM integrations
Tailwind CSS / Web UI

BUILD RANGE

Custom digital products across industries
Web apps, SaaS & internal systems
AI, data & automation workflows
APIs, integrations & connected products
Rapid prototypes through deployed products

HOW I WORK

Start with the outcome, not the feature list
Prototype early and test the real user flow
Keep the product clear, simple and intentional
Ship a working version, then improve it

EDUCATION

Intermediate in Computer Science (ICS)

TIPS College
Faisalabad, Punjab, Pakistan
