

MUHAMMAD ABDULLAH

AI-Native Full-Stack Product Engineer

AI Systems · Developer Tools · SaaS · APIs · Automation · UI/UX
Faisalabad, Pakistan · mabdullah.built@gmail.com · [Portfolio](#) · [GitHub](#) · [LinkedIn](#)

PROFILE

AI-native full-stack product engineer building deployed SaaS, AI systems, developer tools and data-driven products.

Experienced across product architecture, Next.js/TypeScript, APIs, PostgreSQL/Supabase, authentication, LLM integrations, automation, testing and deployment.

Strong at turning ambiguous product problems into structured systems with real workflows, guardrails, verification and production-ready user experiences.

EXPERIENCE

Independent Full-Stack Product Engineer

Product architecture · AI-native development · integrations · deployment

- End-to-end ownership.** Turn ambiguous problems into system architecture, user flows, full-stack products and deployed releases.
- AI-native engineering.** Use coding agents and LLM workflows to accelerate implementation, debugging and refactoring while retaining control of architecture and system behavior.
- Systems and integrations.** Connect APIs, databases, authentication, webhooks, data pipelines and external services into reliable end-to-end workflows.
- Reliability and verification.** Design failure states, automated checks and guardrails so AI-generated changes are verified rather than trusted by default.
- Product UX.** Translate complex system behavior into clear interfaces and refine them through real workflow testing.

ENGINEERING STRENGTHS

- Systems thinking.** Define architecture, data flows, trust boundaries and failure modes before polishing screens.
- Verification mindset.** Treat AI-generated changes as untrusted until tests, checks and evidence show they are safe.
- Product engineering judgment.** Balance technical depth, user clarity, maintainability and shipping speed.
- Fast execution.** Move from an ambiguous problem to a deployed system quickly without dropping reliability or product quality.

SELECTED PROJECTS

RESOLVE / [Live](#) / [GitHub](#)

Outcome-backed funding and settlement platform linking verified contributions to missions, attribution, wallet/USDC flows and release logic.

RepoDiet / [Live](#) / [GitHub](#)

Proof-carrying GitHub maintenance system with bounded cleanup, isolated execution, verification gates and review-ready PR delivery.

MERIDIAN / [Live](#) / [GitHub](#)

Evidence-driven market intelligence OS combining deterministic skills, risk vetoes, historical replay and explainable decisions.

CORE ENGINEERING

Full-Stack Product Engineering
System & Product Architecture
AI / LLM Integration
API & Backend Integration
Database & Data Flows
Authentication & Workflows
Testing & Verification
UI/UX Systems

TECH & PLATFORMS

Next.js / React / TypeScript
Node.js / REST / Webhooks
Postgres / Supabase / Prisma
GitHub APIs / Vercel
OpenAI / Anthropic / Gemini
Playwright / Vitest / Testing
Tailwind CSS / Web UI

SYSTEMS I SHIP

SaaS & internal tools
AI and agent workflows
Developer tools & automation
Data products & decision systems
API-first connected products
MVPs through deployed releases

DELIVERY STYLE

Outcome and constraints first
Prototype the real workflow
Use AI for speed, not blind trust
Test failure states and edges
Ship, observe, harden, repeat

EDUCATION

Intermediate in Computer Science (ICS)

TIPS College
Faisalabad, Punjab, Pakistan
